

Solar Panel Mounting Systems SMS-I Sunipod SMS-I

Modular solar panel mounting systems for flat-roof photovoltaic system installations.

HIGHLIGHTS

- Quick and easy to assemble. Partially pre-assembled for faster installation.
- Minimal tools required for assembly.
- Corrosion resistant galvanized structures.
- Protection from rust and weather degradation.
- Flexible application allows for optimizing mounting angles from 20 to 35 degrees.
- Non-intrusive non-penetrating design requires no drilling through your roof.
- No risk of leakage due to installation.
- Stainless Steel fasteners ensure that the installation is secured for life.
- Compact design means optimized usage of your precious rooftop space.
- Wind loading optimized to withstand strong winds for steady performance.
- Easy customization for your specific module type and location.

Ideal for flat roofs requiring a high concentration of modules while successfully distributing loading on roof-top.

APPLICATIONS:

- Diesel Generator Alternative Using Solar Power Plants
- Lower Your Electric Bill Using Solar Power Stations

Specifications included in this datasheet are subject to change without notice. Electric data without guarantee.
